Verosol Pleated Blinds

Use, Care and Maintenance

Verosol Pleated Blinds add contemporary elegance to any room decor, to maintain that look remember the following:

- Always raise the blinds if windows and/or doors are open, as a strong breeze could catch and damage the blind.
- Avoid exposure to wind or rain, as rain blown onto the blind might stain the fabrics and these spots could be difficult to remove.

Operating Pleated Blinds

- When raising pleated blinds make sure you pull the lift cord forward and towards the centre of the blind. This eases friction between the lift cord and the locking mechanism and will extend the life span of the cord. Do this when lowering the blind as well.
- For Twin Pleats and Duo Pleats, ensure you lower the base rail first, then the mid rail.
- Once a month, leave the blinds up overnight, this helps keep the pleats sharp. While Verosol products have the highest level of pleat retention, the pleats may flatten over time if kept permanently lowered.

Cleaning Pleated Blinds

Little is required to keep Pleated Blinds clean, as they are anti-static, meaning the product resists air-borne dust.

- If dusting is required, use a soft brush or dusting cloth.
- Dirt marks or spills on the fabric must be cleaned ultrasonically. Think of this process the same as taking your silks to the dry cleaners. If the fabric in your blinds have a metallised backing, **DO NOT** spray window cleaner on or near the fabric.

Please contact your Verosol Retailer if you have any further questions or concerns about your Verosol Blinds.
