

TAILOR MADE SOLUTIONS
FOR YOUR OUTDOOR SPACE

FLUX®
TECHNICAL SHEET

DRIVE SYSTEMS

ELECTRIC DRIVE TYPE 1

220 volt / 218 watt motor reducer complete with limit switch. Required for 2, 3 or 4 runners awning, flat version (slack awning) or for the tilted version, with a maximum projection of 350 cm.

RADIO CONTROL for electric drive type 1

Radiofrequency receiver for 1 electric drive with 1 channel transmitter (433,92 MHz).

To be used with command type 1 for remote control.

ELECTRIC DRIVE TYPE 2

220 volt / 218 watt motor reducer with encoder and microchip that controls the canvas tension, guarantees constant correct tension despite size variations caused by differing environmental circumstances, with radio command (433.92 MHz) and 1 channel transmitter. Required for 2 or 3-runners awning, tilted version.

ELECTRIC DRIVE TYPE 3

220 volt / 218 watt + 218 watt pair of motor reducers with encoder and microchip that powers 2 motors and guarantees constant correct tension despite changes in fabric properties caused by differing environmental circumstances, radio control (433,92 MHz) and 1 channel transmitter. Required for 4 runners awning, tilted version.

15 CHANNEL TRANSMITTER

Transmitter for the command of up to 15 channels (433,92 MHz).

MANUAL DRIVE SYSTEM

Gearbox for the manual handling of the canvas. On demand only for 2 runners tilted or flat version with projection up to cm 350.

* Traction strength parameters in Kg/5cm.

PELMETS

Type **A**, h. cm 12 (standard)

Type **B**, h. cm 25 (on demand)

Type **C**, h. cm 25 (on demand)

Type **D**, h. cm 25 (on demand)

Type **E**, h. cm 25 (on demand)

Type **F**, h. cm 25 (on demand)

Type **G**, h. cm 25 (on demand)

Type **H**, h. cm 25 (on demand)

PERGOTENDA® FLUX FEATURES

PERGOTENDA® FLUX is a retractable covering system custom made with curved runners to protect against sun and rain (not suitable to support snow), fixed to a supporting wall. It consists of an aluminium structure and a stacking canvas.

Wind resistance is guaranteed up to class 6 on the Beaufort scale.

The canvas, made from exclusive Corradi Eclissi* fabric, available in white, grey and ivory, with internal concealed obscuration layer and embossed side with weft effect, is supported by intermediate tubes (section: 4x5 cm) and terminals (section: 8x5 cm) set parallel to

one another approximately every 45 cm.

It slides on runners with built-in splashguard (section 6x12 cm) on sliders with 6 misaligned wheels with maximum capacity of 450 kg each.

The toothed drive belt inserted in each runner, with strands completely covered to withstand salinity, is driven by a pulley and a single drive shaft to ensure even canvas movement. The tensile strength at break of each belt is 894 kg.

The PERGOTENDA® FLUX system is operated by a motor-reducer (electric drive) with the possibility of radio control.

Aluminium tubular structure 6x12 cm, available in colours: brown, white, grey, ivory or RAL K7 in glossy or matt finish; titanium and cor10 and anthracite with matt finish. Runners available in colours: brown, white, grey, ivory or RAL K7 in glossy or matt finish; titanium and cor10 with matt finish. Support tubes available in colours: white, grey, ivory in glossy finish. Painted with certified Qualicoat cycle epoxy powders. Stainless steel accessories and 10/10 aluminium protection covers matching the structure.

* See Corradi sample kit for other fabrics.

MAXIMUM DIMENSIONS cm		
	Width	Projection
2 runners	500	650
3 runners	900	650
4 runners	1300	650

PERGOTENDA® FLUX 2 RUNNERS

crossbar 6x12 for protection cover support

modular awning protection cover

electric drive

canvas

wall beam (supplement)

pillar 6x12

supporting runner 6x12

frontal beam 6x12 (supplement)
mandatory over 400 cm projection
or over 450 cm width

PERGOTENDA® FLUX 3 RUNNERS

PERGOTENDA® FLUX 4 RUNNERS

modular awning protection cover

canvas

crossbar 6x12 for protection cover support

electric drive

trave wall beam
(supplement)

supporting runner 6x12

pillar 6x12

frontal beam 6x12 (supplement)
obligatory over projection cm 400

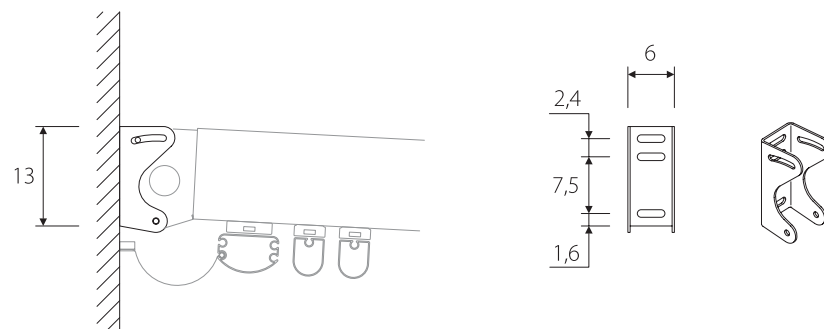

PERGOTENDA® FLUX DIMENSIONS

All measurements are given in cm.

PERGOTENDA® FLUX ANCHORAGES

DIRECT FITTING TO WALL

FITTING TO WALL WITH BEAM

OVERHEAD ANCHORAGE

GROUND ANCHORAGE

All measurements are given in cm.

PERGOTENDA® FLUX CANVAS ENCUMBRANCE

Minimum values of the encumbrance of the folded awning for the tilted version (slope 15%). The figures written in bold type refer to the canvas encumbrance with standard support tubes and the following refer to the use of additional tubes.

		SUPPORT TUBES TOTAL NUMBER										
		4	5	6	7	8	9	10	11	12	13	
PROJECTION cm	226	31										A
	285		32									
	345			33								
	404				34							
	464					35						
	523						36					
	583							37				
	590								35			
	650									35		
		39	46	53	60	67	74	81	88	95	102	B

All measurements are given in cm. The projections refer to the limit beyond which the standard number of tubes increases.

S1 Antidrop system + Antispray profile

Weldable PVC profile on the upper part of the canvas for lateral rainwater prevention complete with antispray profile PERGOTENDA® IRIDIUM® preassembled on runners.

S6 Retractable gutter

Extruded aluminum profile for rainwater collection, only for pitched versions, fixed to the end support tube. One drainage per runner. Mandatory for 2-runners model with over 450 cm width.

S16A Frontal beam

Finishing aluminium profile or for the application of closures. Mandatory (not standard) for 2-runners model to reinforce the structure with over 400 cm projection or over 450 cm width, but not necessary with frontal ERMETIKA®.

S16B Frontal beam with protection hood

As S16A with addition of aluminium protection hood for joining to movable gutter.

S17 Wall beam

Aluminum profile for uneven walls, where standard fastening to supports is awkward; or otherwise to deal with minor bumps.

S4 Add-on runner

PERGOTENDA® IRIDIUM® runner complete with pillar 6x12, stainless steel supports, sliders, support tube joints, central transmission shaft with bushes.

S5 Add-on intermediate support tube

Complete intermediate support tube with endcaps, joints (where present) and intermediate sliders.

Dear CLIENT,

The following table contains the features of the components and materials used in Corradi Group products: Pergotenda® collection, sail awnings and outdoor furniture. These features identify the particular nature of the materials and are not to be understood as manufacturing defects.

	PRODUCT FEATURES
GENERAL	The structure is not watertight. In case of particularly violent storms with strong winds water seepage may occur.
	In case wind values should exceed those shown on the statement of correct installation, it is necessary to close the awning. It is possible to use a properly calibrated anemometer.
	The product does not guarantee the snow load. In presence of snow, even of low intensity, the canvas should be closed.
	To have your product warranty the certificate of proper installation is MANDATORY. A copy must be given to the final customer and a copy shall be sent to Corradi SpA. The reception of the duly completed certificate will activate the product warranty.
	Any change to the product not expressly authorized by Corradi SpA leads to loss of warranty.
	The structures that are located in an urban environment are subject to pollutants (smog, acid rain), smoke from chimneys, fumes from cooking, and weather in general. It is normal for the fabric and the structure to get dirty. The structures and the fabric are NOT self-cleaning.
SELF-SUPPORTING	By applying a lateral load on the pillar an oscillation in the structure may occur. This movement is not a sign of structural weakness, but is considered normal for the type of structure. The structure has been calculated by qualified engineers using the Eurocodes and is guaranteed to wind up to the level indicated in the EC certificate and in the Declaration of correct installation.
CANVAS	Depending on the installation conditions, it is possible that the cloth gets dirty (pollutants, smoke from chimneys, smog, etc.). In this case it may be necessary to clean the fabric more frequently as indicated in the section maintenance.
	The cloth is not immune from burns caused by cigarette butts, etc..
	In particular situations of use of the structure, condensation may occur on the inside of the fabric. To limit this condition proceed with an adequate ventilation of the room.
	The appearance of mold in the embossing of the fabric is due to the presence of moisture on the sheet that favors the formation of micro-organisms. It is therefore necessary to clean the fabric at regular intervals, more frequently if necessary.
	The presence of folds on the fabric after the first installation may be due to packaging. It is necessary to keep the fabric in position for at least 10 days, and evaluate the quality of the product after this period of time.
FALSE CEILING	In particular situations of use the structure may present condensation in the area between the canvas and the ceiling. This may cause dirt and / or mold in the intermediate zone. Remove the false ceiling and wash it.
GUTTER	Periodically check that the drain pipes of the gutter and downspouts are clean. Discard leaves and other detritus that can clog the drain holes.
	In case of very heavy rainfall it is possible that the gutter is not able to drain the water. This may cause water infiltrations.
	The water-conducting to the ground may not be controlled by Corradi SpA, but by the final customer. The installation conditions, slopes and any collection wells, are the sole responsibility of the final customer.
LAMPS	To maintain good efficiency in the seals, thereby ensuring the IP product protection level (shown in the manual), you must do the maintenance indicated in the manual.

PRODUCTS FEATURES

	PRODUCT FEATURES
AWNING SAILS	The presence of folds on the sail is due to the long winding of the sail on the roller tube. To limit this phenomenon and to have the warranty the use of the sailcover is mandatory.
	The presence of folds on the sail immediately after the first installation may be due to packaging. The folds will disappear completely after about 6 months of installation.
VELOMBRA FABRICS	The fabrics are "dyed in the piece", this can cause a non-perfect uniformity and consistency of color.
WOOD	WARNING: It is good to remember that any kind of wood type placed outside, and directly exposed to weather elements, may look "lived" even after a relatively short period of time. This manifests itself mainly with:
	• discoloration of the surface (the degradation varies depending on the moisture content to which the wood is subject)
	• with the irregularity of the surface due to cyclic phenomena of swelling and shrinkage and possible mechanical wear of the surface.
	Since wood is a natural material, there are differences in color and grain and therefore all elements are different. Furthermore, depending on the viewing angle the aspect is quite different because of the iridescent nature of the material. The samples and photographic reproductions are thus regarded as indicative and not binding.
	The wood is placed under a protective treatment performed in autoclaving which allows a better resistance to attack by fungus and mold. This treatment is green (due to the salts used for impregnation), and is performed before painting the beams. The appearance of green stripes on the wood as a result of leaching of the paint finish by bad weather is normal in case of bright colors. In this case you must proceed with the maintenance as indicated in the manual. The beams may present vertical stripes of different shades. This is normal and is due to stacking that occurs inside the autoclave during the impregnation treatment (the beams are spaced apart by transverse beams).
	The presence of resin is a characteristic of coniferous wood.
	A dimensional variation of wood products after exposure to moisture is normal. The reference humidity for the measuring is 12% (defined in the UNI EN390: 1997).
FLOOR	The floor may dent in collisions or falling objects and the implementation of concentrated loads on a small area, such as chairs with wheels, high heels and ladders is not suitable.
	The floor can scratch as a result of contact with small objects such as nails or stones present beneath the soles of shoes.
	At the time of delivery, the floor may be different from that of the samples after exposure to light which causes a change in the wood color.
FURNITURE	During the winter it should be protected from the weather. It should be cleaned before being sheltered for the winter.
	If the furniture is used in a marine environment it should be washed periodically with fresh water to remove traces of salt.
	Stainless steel features see STAINLESS STEEL voice
MOTORS	Electrical system: it must be performed by a licensed electrician who shall issue a certificate of conformity of the electrical system.
	The system has to have an appropriate degree of protection being installed outside. A licensed electrician is able to properly size the system and choose the right components (adequate IP protection).
	Any voltage drop or radio interference may result in loss of the limit switches of the engines. In this case it is necessary to proceed with a new programming as indicated in the Manual.
STAINLESS STEEL	The components in stainless steel require no maintenance. The appearance of micro-oxidation, most frequently in maritime environments characterized by salt spray, does not affect the quality and durability of the product such oxidations are believed to be normal. In case you need to remove these oxidized points you can use a steel wool or a metal bristle brush (in stainless steel). The protective film of chromium oxide (autopassivation) will reset in a natural way with the only exposure to air, without any intervention by the user.
ALUMINIUM	The presence of marks and scratches is considered a fault only if these are visible at a distance of 2 meters.
	Do not use acid to clean the painted aluminum, but only mild soap and water.
GLAZING	For aluminum frames refer to the ALUMINIUM voice.

	PRODUCT FEATURES
ERMETIKA®	The temperature inside the protection hood can reach very high values, if exposed to direct sunlight during the summer. This may result in bonding of the fabric if the awning is not handled for long periods. It is recommended to open and close the awning on a frequent basis to avoid this problem.
	If the fabric is rolled up for long periods creases and wrinkles may appear on the fabric. The fabric is made of PVC and its nature is not comparable to a glass. It is necessary to keep the awning stretched for at least 48h to soften creases and wrinkles.
	In case of installation in areas affected by dust and wind (e.g. beach facing the sea) it is possible that the fabric may be damaged losing the transparency due to the combined action of wind and sand.
	To maintain a good efficiency on the awning and the locking device it is necessary to maintain the vertical runners clean as shown in the maintenance chapter.
	Make sure there are no obstructions that may impede the orderly movement of the awning. This may cause malfunction of the locking devices of the awning.
	If there is ice/snow runners should be cleaned thoroughly before operating the awning.
RUNNERS	After some time from the installation and if no periodic maintenance is performed on the runners, as indicated in the manual, there may be noise in the runners and sliders.
