

## markilux 8850

The designer conservatory awning with indented guide tracks for bevel-edged conservatories.

**markilux**

## markilux 8850

The designer conservatory awning with indented guide tracks for bevel-edged conservatories.

### Design features **Design**

- the round cassette and angular guide tracks harmonise perfectly with one another and with the shapes found in contemporary conservatory design.
- when fully extended the rounded front profile sits flush with the end of the guide tracks, giving the system a completely closed appearance
- when retracted the cover is protected from the weather by the cassette, which encloses it completely
- for long-lasting attractiveness the awning has been powder coated

### Technical highlights

- awning completely pre-assembled and tested in the factory
- indented guide tracks – for use on bevel-edged conservatories
- guide tracks can be indented up to 100 cm – if the system is asymmetrical the difference may not exceed 40 cm
- guide tracks can overhang the outermost bracket by up to 100 cm giving even greater from the sun
- permanently high cover tension is achieved by way of two special gas-piston mechanisms operating independently of one another
- brackets with patented clip-on mechanism for simple, problem free installation

### Additional features

- radio-controlled motor with remote control for comfortable operation, markilux remote control with ergonomic design
- an easily installed, radio control light and wind sensor guarantees comfort and a degree of safety even in your absence
- wall sealing profile to cover the gap between awning and wall
- to simplify fixture, a broad selection of brackets is available
- awning available in non-standard RAL colours

### Standard specification

motor

sunsilk snc fabric

sunsilk snc signature fabric

acrylic fabric 34

perfortex fabric

### Standard frame colours

traffic white - RAL 9016

metallic aluminium - RAL 9006

grey brown - similar to RAL 8019

anthracite metallic - 5204

### Optional accessories

radio-controlled motor with remote control

wall sealing profile

sun sensor and wind sensor

sunvas fabric

non-standard powder-coated finish

Housing tolerances / Awning cover dimensions	width	extension
housing tolerance	+5 / -5	
awning cover width	= fixture width less 60 for units with guide tracks on the outside	
	= awning width less 160 for units with indented guide tracks	
awning cover length		on request

measurements in mm

The width of the awning cover is always less than the width of the awning.

**Definition of fixture/order width:** The order width is a combination of the fixture width i.e. the measurement from fixture point to fixture point on the conservatory and the overhang on either side. The overhang on the left and on the right may be between 10 cm and 100 cm (see the L and R measurements in the diagram). The fixture width must be greater than the larger of the two overhangs (L and R). In the case of asymmetrical units the difference between the overhang on the left (L measurement) and the overhang on the right (R measurement) may not exceed 40 cm. The fixture width tolerance is + 5 mm / - 10 mm.

**Definition of extension:** the nominal extension is measured with the awning extended from the back of the cassette to the leading edge of the front profile (the guide tracks will extend 90 mm past this point). The tolerance in the projection is + 40 mm / - 40 mm.

**Definition of operating side:** the operating side is always given as if seen from the outside (right or left).

Face fixtured awnings can be pitched between 5° and 45°. \* Awnings mounted to a frame system can be pitched up to 90°.

Units where the cover extends upwards from the cassette are not available.

**N.B.!** If the motor is used continuously it will stop automatically after 3 to 4 minutes to prevent overheating.

**N.B.!** In contrast to standard motors, radio-controlled motors have no safety cut-out mechanism if the front profile is obstructed. If this function is required in combination with radio-controlled operation, order the hard-wired motor with an external radio receiver and an appropriate transmitter.

In the case of a bank of awnings operating simultaneously, the same speed of rotation of the motors cannot be guaranteed because of the internal tolerances of the motors.

The extension rate of a single unit with hard-wired motor takes approx. 18 seconds per metre.

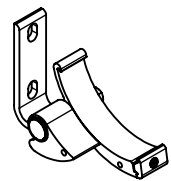

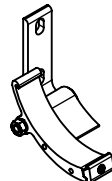

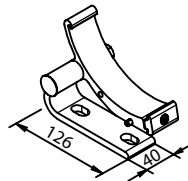

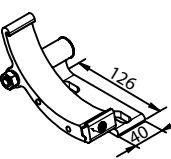

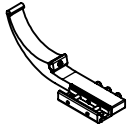

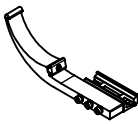

**N.B.:** From an extension of 351 cm the cover may sag during extension and retraction of the awning. In windy or wet weather and with cover areas larger than 16 m² the cover may come into contact with the conservatory roof.
