## markilux 889 / 889 zip

Horizontal and highly functional – the under-glass awning for optimum shading of large areas – optionally with zip system.

### Design features

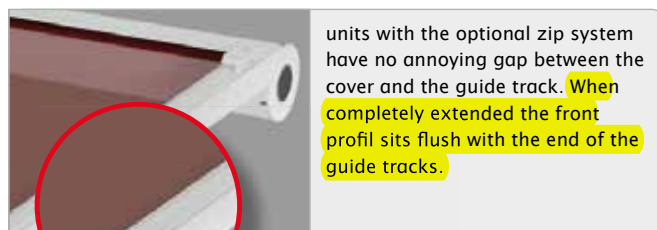

- beautifully crafted, teardrop-shaped aluminium cassette only 130 mm in height
- the compact, rounded profiles make it discreet and unobtrusive
- the panel joints of the awning cover are ultrasonically bonded – for an improved appearance without unsightly stitching
- when retracted the cover is protected from the weather by the cassette, which encloses it completely
- for long-lasting attractiveness the awning has been powder coated
- in the case of manual operation it is supplied with a markilux stainless steel winding handle – quality to get to grips with

### Technical highlights

- the 85 mm roller tube ensures the highest rigidity and the best possible cover winding characteristics even at the largest sizes
- awning completely pre-assembled and tested in the factory
- brackets with patented clip-on mechanism for simple, problem free installation
- special vario-belts provide optimum cover tension when the awning is completely extended
- one or two barely visible stainless steel wires limit the sag in the awning cover on larger units (not required on units with zip system)

### Additional features

- hard-wired motor operation (optionally with automatic weather controls) for straightforward and easy operation
- radio-controlled motor with remote control for comfortable operation, markilux remote control with ergonomic design
- zip system – attractive completely closed appearance – the zip system does away with the annoying gap between the blind cover and the tracks. When completely extended the front profil sits flush with the end of the guide tracks.
- awning available in non-standard RAL colours

### Standard specification

manual operation with stainless steel winding handle

bonded awning cover

sunsilk snc fabric

sunsilk snc signature fabric

acrylic fabric 34

widely woven acrylic fabric

perfortex fabric

transolair fabric

### Standard frame colours

traffic white - RAL 9016

metallic aluminium - RAL 9006

grey brown - similar to RAL 8019

anthracite metallic - 5204

### Optional accessories

hard-wired or radio-controlled motor with remote control

zip system

sun sensor and wind sensor

sunvas fabric

non-standard powder-coated finish

 ●<sup>1</sup> = up to a maximum extension of 400 cm;  
 not available on units with zip system  
 ●<sup>2</sup> = only up to a fixture width of 400 cm; from a fixture width of 329 cm and an extension of 330 cm with horizontal seam

Housing tolerances / Awning cover dimensions	width	extension
housing tolerance	+5 / -10	
awning cover width = fixture width less	standard	0
	80 motor	
	90 manual operation	
awning cover length = awning extension less		145* <sup>1</sup> /155* <sup>2</sup> standard
		50 zip system

\*<sup>1</sup> for extensions up to 2000 \*<sup>2</sup> for extensions from 2001 dimensions in mm

The width of the awning cover is always less than the width of the awning.

**Fixture / order width definition:** The order width is the awning fixture width i.e. the measurement from fixture point to fixture point underneath the glass roof. The overall width is larger than the fixture width (v. matrix). The tolerance in the width is +5 / 10 mm.

**Definition of the extension:** The nominal extension on standard units is measured with the awning extended from the rear edge of the cassette to the leading edge of the front profile (the track extends a further 75 mm). The tolerance in the extension is +40 / -40 mm.

**N.B.!** If the motor is used continuously it will stop automatically after 3 to 4 minutes to prevent overheating.

**Definition of operating side:** the operating side is always given as if seen from the outside (right or left).

The extension rate with a **hard-wired motor** is approx. **9 seconds per metre** and with a **radio-controlled motor** approx. **14 seconds per metre**.

Due to its own weight a certain amount of sag in the cover is possible. Similarly all profiles may deflect slightly for the same reason. Neither phenomenon has any negative effect on the function or operation of the awning if it has been fitted correctly.
